Sustainability and carbon reduction are now top priorities for specifiers and users of Cable Avoidance Tools and Cover Locators.

C.Scope's Li-ion Rechargeable Battery Packs and Chargers deliver the perfect blend of cost efficiency and environmental responsibility.

Purpose-designed to fit within the battery compartments of C.Scope XL4 Cable Avoidance Tools, Signal Generators and the C.Scope CS880 Metal Cover Locator, these Li-ion packs offer standout benefits.

Why choose C.Scope Li-ion Rechargeable Battery Packs?

Longer run times

Li-ion cells have a far lower self-discharge rate than traditional rechargeable options like Ni-Cad and NiMH, meaning significantly longer operation between charges. Their higher current capacity is perfectly suited to modern Cable Avoidance Tools with built-in GPS, Bluetooth, and today's higher-power Signal Generators.

Low maintenance

Unlike Ni-Cad batteries, which need regular discharging to prevent memory effect, Li-ion batteries deliver consistent high performance with zero maintenance.

Cost-effective

C.Scope Li-ion Battery Packs provide substantial savings compared to alternative power options—without the hefty price tag.

Upgrade and Save

Upgrade your C.Scope Cable Avoidance Tool or Signal Generator with a Li-ion Battery Pack Kit for just **£45***—or get **both kits for only £80***. The C.Scope Cover Locator kit is also just **£45***.

Each kit includes:

- Li-ion Battery Pack
- Vehicle Charger
- Mains Charger

(*Prices exclude VAT.)
